

# WE\_Build

The Collaborative Planning Simulation Game

**Time is energy, but the construction processes are full of waste!**

- **60%** of the building time is wasted in waiting for men, machines or material
- **30%** of the time is wasted in re-works of errors
- **50%** probability that the specific building activity will end as scheduled
- **10%** of the delivered material are wrong or defective

**Lean Construction principles** help eliminate the waste and increase the efficiency of your construction processes!

**WE\_Build** is a practical training module on the „Collaborative-pull-planning“ process, to improve the efficiency of your construction work.

Do you want to learn how to save time and energy?

And maybe improve at the same time the safety and quality of the works?

„Lean construction“ principles helped the most successful companies in the construction sector save all these resources and quickly become marked leaders.

One of the most effective tool is „Cooperative pull-planning“, which dramatically improves the efficiency of the on-site-processes in terms of schedule, quality, safety and cooperation.

WE\_Build is a training course developed in the framework of „CommONEnergy“, designed to teach this simple management technique. The course is accessible to people with all level of knowledge (site technicians, artisans, engineers, project managers) and provides, in just 6 hours of very practical training, the knowledge to apply the tool on the „next possible construction work“.
